## MODULE INTRODUCTION

### What Lies Ahead

In this Module Introduction the student will preview the module and learn how the module will be evaluated.

### Gathering Materials

For this section the student will need these items.

### Guiding the Student

- Emphasize to the students that the goal of this section is to preview the module.
- Discuss the learning process, time management, and evaluation with the students. See the suggestions on the next page of this booklet.

## The Learning Process

Each section of Module 3 deals with a different skill involving fractions and decimals. Sections have several activities.

- Introductory Activities
- Practice Activities
- Extra Practice
- Concluding Activities

Remind the students that they will not be expected to do all the activities. You will help them decide what to do.

## Time Management

Decide how long the students will need to complete the module. An average student should spend about 7 weeks of a 40-week year to complete the module. It is recommended that students spend no more than 1 hour at a time doing mathematics.

## Evaluation

Explain to the students how the module will be evaluated.

## KEEPING SKILLFUL

### What Lies Ahead

In this section the student will review these skills.

- recognizing place value of decimal numbers
- rounding decimal numbers
- comparing and ordering decimal numbers
- performing operations on decimal numbers

### Gathering Materials

For this section the student will need these items.

base 10 blocks

### Guiding the Student

- Emphasize to the students that the goal of this section is to review some of the skills developed in previous grades.
- Help the students check the answers to the review and correct any errors. If a student is still experiencing difficulty, you may wish to assign sections in Mathematics 7, Module 3 and the accompanying Learning Aids Booklet.

### Suggested Answers

$$\begin{aligned}
 1. \quad & 32 + \left(\frac{1}{8} \times 32\right) + \left(\frac{1}{4} \times 32\right) + \left(\frac{1}{8} \times 32\right) \\
 &= 32 + 4 + 8 + 4 \\
 &= 48
 \end{aligned}$$

The dinosaur is 48 m long altogether.

2. Pam had a bag of candies. She gave  $\frac{1}{2}$  of the candies to her sister and ate one herself. After that she gave away  $\frac{1}{2}$  of what she had left and ate one herself. Finally she gave away  $\frac{1}{2}$  of what she had left to her friend and ate one herself. If she had two candies left and if all the candies were whole, how many candies did she have originally?

Work backwards.

At the end she had two candies left.

In the last step she gave away  $\frac{1}{2}$  of what she had and ate one herself. How many candies did she have before this?

$$\frac{1}{2} \times \boxed{\phantom{00}} - 1 = 2$$

$$\frac{1}{2} \times \boxed{6} - 1 = 2$$

She had 6 candies previously.

In the middle step she gave away  $\frac{1}{2}$  of what she had and ate one herself. How many candies did she have before this?

$$\frac{1}{2} \times \boxed{\phantom{00}} - 1 = 6$$

$$\frac{1}{2} \times \boxed{14} - 1 = 6$$

She had 14 candies previously.

In the first step she gave away  $\frac{1}{2}$  of what she had and ate one herself. How many candies did she have before this?

$$\frac{1}{2} \times \boxed{\phantom{00}} - 1 = 14$$

$$\frac{1}{2} \times \boxed{30} - 1 = 14$$

She had 30 candies at the beginning.
